Investment Program Description

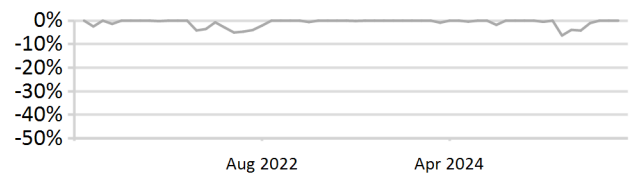

Athena Quantitative is a market-neutral, low-frequency strategy focused on systematically trading S&P 500 options. It seeks to generate returns through the passage of time and the exploitation of implied volatility mispricings with an emphasis on capital preservation and tail risk mitigation. The strategy integrates a robust, multi-layered risk management architecture, combining traditional exit protocols with embedded black swan hedges, enhancing resilience and offering the potential to profit during periods of extreme market stress and volatility dislocations.

PAST PERFORMANCE IS NOT NECESSARILY INDICATIVE OF FUTURE RESULTS. Please refer to important disclosures at the end of this document.

¹Performance is stated net of applicable management, incentive and sponsor fees (prorated for partial periods as applicable). Unless stated otherwise, management fees are payable on a monthly basis at the rate set forth above, and performance fees are payable quarterly and calculated using the above percentage of 'New Net Profits' for an applicable period. 'New Net Profits' are the amount by which each capital account's Net Asset Value (NAV) exceeds the greater (adjusted for any withdrawals or distributions) of (1) the capital contribution that established such capital account and (2) the NAV of such capital account immediately after deduction of the most recent Performance Fee. Sponsor fees are chargeable monthly and range from 25-80 basis points.
²Performance data reflected only use returns achieved on the Galaxy platform.

Disclaimer

PAST PERFORMANCE IS NOT NECESSARILY INDICATIVE OF FUTURE RESULTS.

Alternative investment products, including hedge funds, and managed futures, involve a high degree of risk. Alternative investment products, whether utilizing leverage or not, can be volatile. An investor could lose all or a substantial portion of his or her investment.

This presentation is strictly confidential and may not be reproduced or redistributed in whole or in part nor may its contents be disclosed to any other person without the express consent of New Hyde Park Alternative Funds, LLC ('NHPAF'). NHPAF provides investment advisory operational services to segregated series (each, a 'Galaxy Plus Fund' or a 'Fund') of Galaxy Plus Fund LLC, a Delaware series limited liability company, and segregated portfolio companies of Galaxy Plus Fund SPC, a Cayman Islands segregated portfolio company (together, the 'Platform'). NHPAF, through the Platform, provides a managed account platform-type experience. Each Fund invests its assets in a segregated trading account held or established in the name of the relevant corresponding Fund, not the Platform, which is independently managed by a third-party trading advisor (each, a 'Manager'). This presentation may not be relied on in any manner as legal, tax, regulatory, or investment advice and is not an offer to sell securities of any investment fund or a solicitation of offers to buy any such securities. Such offer may only be made at the time a qualified offeree receives the governing agreement and subscription materials of a Fund and, if applicable, a private placement memorandum describing the offering and its terms (collectively, the 'Governing Documents'). There is no guarantee that the investment objective of any strategy described herein will be achieved. All returns are stated net of management, performance and sponsor (generally ranging from 0.25%-0.80%) fees. An individual shareholder's return and ratios may vary based on different performance and/or management fee arrangements, and the timing of capital interest transactions. This presentation contains information and opinions from third party sources. Information with respect to the Manager presented herein and industry data has been obtained from sources believed to be reliable and current, but accuracy cannot be guaranteed. Any monthly results shaded in grey are manager-reported and reflect results independent of the Galaxy Plus Fund, LLC. Unless otherwise stated in this presentation, data charts and tables use composite data from the inception of the program covering, as applicable, the program's performance both prior to and following its launch on the Platform. Monthly returns prior to 2019 available at request (when applicable). The accuracy of Manager reported returns have not been independently verified by NHPAF. Certain investor accounts in the Fund may be subject to fees that are different from the standard fees set forth above and in the Governing Documents. Investor accounts with non-standard fee arrangements that are materially different from the Fund's composite rate of return are not reflected in the Fund's composite rate of return reflected above under applicable regulatory guidance, and further, are likely to experience a higher rate of return as a result of such non-standard, generally more preferential, fee arrangements. Pro forma rates of return for accounts with nonstandard fee arrangements may be made available upon a reasonable written request to the Sponsor. Indices are presented herein for illustration purposes only as a Fund does not intend to track any index or benchmark. The performance and characteristics of the various indices presented herein are not an exact representation of any particular investment, as you cannot invest directly in any of the indices. Broad based indices are unmanaged and are not subject to fees and expenses typically associated with actively managed portfolios. Comparisons to indices have limitations because indices have volatility and other material characteristics that may differ from a particular fund or portfolio. As such, indices should not be relied upon as an accurate measure of comparison. The 'Barclay CTA Index' is an industry benchmark of representative performance of commodity trading advisors in the BarclayHedge database that meet certain inclusion requirements. The 'Bloomberg BCOM' is a broadly diversified commodity price index distributed by Bloomberg Index Services Limited. It tracks prices of futures contracts on physical commodities on the commodity market, and is designed to minimize concentration in any one commodity or sector. The 'SP 500 TR' is a total return index that tracks both capital gains and cash distributions attributed to, in addition to stock performance of, the companies whose stock performances make up the Standard and Poor's 500.
